"Nanotechnology at NASA"

This 10-minute video highlights nanotechnology R&D at NASA and its many potential applications for space exploration. The video stresses collaboration as key to the success of applied nanotechnology and discusses the cooperation currently going on between various NASA centers.

This film focuses not only on NASA's goal for collaboration within, but also its goal for establishing successful partnerships with industry, academia and other government labs. These goals for collaboration and partnership will benefit both society and the Space Program.
